/note-"Vector. plasmid pBK CMV, Site_1. Ecckl, Site_2:
Xhol; mkNA was made from developing caryopsis (3.-15.DAF)
of spring karley 'variety' Barke', a high quality malting
variety. Cloning sites: Ecokl (5'-end of cDNA) and Xhol
(3'-end of cDNA). NOTE: Due to a cloning artelact caused
by the kit, in most cases the Ecokl site is NoT present,
as well as the Ecokl adapter. Average insert size is 1 kb
Sequence trimming. Vector sequences and sequence ends were
trimmed from the 5' and 3' end until a 50 bp window.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Eukaryota, Viridiplantae: Streptophyta: Embryophyta; Tracheophyta;
